Important during the treatment

- Do not enter treated rooms for at least two hours.
- After the initial two hours, you can use the furniture and rooms as usual. However, do not remove or move furniture, bedding and other things until we have given the go ahead.
- Hypersensitive people such as those suffering from asthma or allergies, children under two years, pregnant women and pets should avoid spending longer periods in treated rooms as long as any odours persist.
- Do not mop or vacuum the rooms during the weeks of treatment.
- Do not hang the laundered curtains until the treatment is over.

About the treatment

We help you solve any bedbug problems as quickly as possible. However, even though modern methods are effective, it can take four to seven days before they start to take effect. It usually takes about eight weeks before the bedbugs are completely eradicated.

This is the normal process:

Week 1: You will not notice any major changes at this stage. The bedbugs must first come into contact with the insecticide before it can take effect.

Week 2–4: You will start to find dead bedbugs on the floor and along the skirting boards.

Week 4–6: Bedbug eggs hatch after 20–30 days, and you will start to notice small bedbugs (nymphs). However, they are sensitive to the treatments and will only live for a short period.

Week 6–8: At this point there should be no more signs of bedbugs but we will contact you and if any bedbugs are still present, we will continue the treatment.
